How to Identify a Fake

String Feel:
If you run a string through your thumb and forefinger, it should be smooth, supple and consistent in feel. Inferior strings may feel rough and sticky. Too much wrap wire tension can make a string feel stiff and lack flexibility.

Wrap Wire Color & Consistency:
D'Addario uses only the finest raw materials and has rigorous inspection procedures at our vendors and our own plant to ensure that all materials used meet our specifications.

- **Authentic:**
  - Bright nickel-plated wrap wire
  - Properly machined ball end

- **Counterfeit:**
  - Dark inferior wrap wire
  - Undercutted ball end

If the wrap wire is dark, dirty or inconsistent in color, there is a good chance you are being sold a counterfeit product.

String Length:
All D'Addario guitar strings have windings a full 39” (1 meter) long. Many counterfeits are shorter to save materials and cost. Measure your strings before installing them.

Get the Real Thing

Ask your retailer if the strings he is selling you are authentic. In some countries, retailers will actually ask you if you want authentic strings or copies. Always shop at a trustworthy retailer who only stocks the original, “Made in USA, D'Addario strings.”

Authentic D'Addario Strings — The Player’s Choice

Be sure you are buying authentic “Made in USA, D’Addario Strings.”

Recently, there has been a rash of counterfeit D’Addario products being sold throughout the world. Unscrupulous merchants have copied our packaging and product designs carefully and are illegally and unethically trading on D’Addario’s 300+ year heritage for making the world’s finest strings and accessories.

You can assure yourself that you are buying a genuine D’Addario product by carefully inspecting the packaging and the strings. Here are some telltale signs that the strings you are buying may not be authentic, Made in USA, D’Addario strings:

Read on to learn more about how to identify counterfeit strings and what you can do to ensure that you are always purchasing the original, “Made in the USA, D’Addario strings.”

**Packaging Quality:**
Unclear type-setting, soft and inferior paper quality, poor print quality, scuffed or scratched packages, blurry photographs and images, and strings with a clear vinyl outer package, are all signs of counterfeit material.

**String Quality:**
While some traits of a great string are hard to visually identify, there are some very strong simple indicators that your strings may not be the original. Inspect the ball ends and twisted areas of the wound strings and plain steel.

**Authentic**
- Precision bronze-plated hexagonally-shaped steel core
- Tinned or bare steel core
- Vinyl pouch discontinued in 2002
- No oval swirl around logo
- Winding description in bar across XL logo
- Logo with swirl
- Tone description in upper right corner

**Counterfeit**
- Poorly printed quality code
- Missing quality code
- Fine print quality
- Ball end shape not cylindrical
- Proprietary shaped and machined ball end

**Acoustic Steel Strings:**
All D’Addario acoustic steel string sets utilize a micro-grain, hexagonally-shaped, high-carbon steel alloy that is plated with 80-20 bronze.

The micro plating is only one micron thick ensuring that the edges of the hexagonally-shaped wire remain sharp and are able to bite into the bronze wrap wire as it is wound around the string. D’Addario’s bronze string specifications have been mimicked worldwide but never equaled.

Look at the end core wire protruding from the end of an acoustic string. If it is not a yellow bronze color, it is not an authentic D’Addario string.

**Plain Steel Strings:**
Plain Steel Strings should have a set of even twists adjacent to the ball end and then 2 or 3 tight lock twists after the even twists. The overall twisted area on a D’Addario string is shorter than on a counterfeit string.

**Wound Strings:**
Inspect the ball end area of each string. The overall twisted area on a D’Addario string is shorter than on a counterfeit string.

**Corrosion Inhibitor Bag**
Every D’Addario inner bag includes a printed quality code. Counterfeit packages often do not have this code or the printing quality is poor.

There should be no excess wrap wire protruding from the string.

The ball end should be properly machined with no metal burrs or sharp edges. The ball end is cylindrical and should have nice chamfered (angled) edges on the hole and the outer edges.

**How To Identify a Fake**
- There should be no excess wrap wire protruding from the string.
- The ball end should be properly machined with no metal burrs or sharp edges. The ball end is cylindrical and should have nice chamfered (angled) edges on the hole and the outer edges.
